(2) – 10mm Flange Nuts

(4) – Flat Washers

(2) – Lock Washers

Required Tools

Safety Glasses
Penetrating Lubricant
Lubrication Solvent
Ratchet
15mm Socket

Warranty Information

IMPORTANT – The warranty on this product is VOID if the product is not properly installed, or has been modified or altered in any way. If you believe that modification or alternate installation method will be required to fit an MRT Exhaust System on your vehicle, **please contact** MRT for assistance **BEFORE** making any modifications to the system.

Begin with removing the factory exhaust system:

STEP #1: With the vehicle elevated, apply penetrating lubricant to the fasteners at the axle-back flange and lubrication solvent to the hanger rods to aid in removal.

Step #2: Remove hardware connecting the two flanges.

Step #3: With an extra set of hands remove the hanger rods from rubber isolators and set factory axle-back system aside.

Installation steps for the MRT Axle-Back Exhaust System:

Step #1: With an extra set of hands insert all four hanger rods into the rubber isolators.

Step #2: Place the supplied 2 bolt gasket between the two flanges and insert the supplied hardware, snug down but do not tighten yet.

Step #3: Ensure tip location is in desired position and tighten hardware connecting the two flanges.

Step #4: Check connection point and start vehicle to check for leaks in a well ventilated area. If leaks are found review each step of the installation procedures and check for any missed steps in the process.

Step #5: If no leaks are found take vehicle for a drive and enjoy your new MRT exhaust system.

During vehicle operation heat cycles tubing will expand and contract, because of this we suggest checking hardware, re-tighten if necessary after 30 miles of driving vehicle.

MRT appreciates your business; please feel free to contact us at any point with questions or concerns at 734-455-5807 or via email at Sales@MRT-Direct.com
